

Notearama FAQ

What is Notearama?

Notearama is a cloud-native **Knowledge Publishing System** for users of popular personal knowledge management (PKM) apps. It allows users to quickly and easily turn notes/notebooks into structured, web-published, and potentially monetizable content. *It is ideal for users and businesses that already have an audience and Web presence but would benefit from adding a “depth layer” to their website, blog, or portal for a quicker, simpler, and easier way to publish sequential, time-sensitive, frequently changing, or more detailed information than is practical on a website.* [Here is a brief overview presentation.](#)

Depending on your content and audience, it can also serve as a **Living Knowledge Library**: Instead of publishing static pages like a typical CMS, Notearama publishes knowledge that evolves automatically as the author’s notes evolve.

Who is Notearama for?

- Knowledge workers who use PKM apps like Evernote, Microsoft OneNote, Google Keep, Notion, Obsidian, and others as well as Markdown files.
- Knowledge workers who do not yet use PKM apps but would benefit from choosing one for the ability to create and manage rich content and publish it effortlessly
- Small businesses looking to distribute content that augments their existing Web presence
- Solopreneurs and consultants looking to build their businesses on expertise and thought leadership
- Educators and researchers who want to share their work or knowledge
- Customers, clients, prospects, students, colleagues, and partners of the above organization types

Which apps does Notearama integrate with?

Notearama supports integration and imports from popular PKM apps, including:

- Evernote (Works with Evernote via direct Web access, or via Evernote .enex file exports)
- OneNote (Works with OneNote via direct Web access)
- Google Keep (future)
- Notion (future)
- Obsidian (future)
- Markdown files (future)

What are the benefits of signing up for Notearama vs. just visiting the site?

- Organize, publish, share, and monetize your content in notebooks
- Follow notebooks and notebook collections for update notifications
- Easily publish to build authority, credibility, and grow your business
- Interact with publishers via private direct messaging

Where do my notebooks get published?

- By default in the Notearama [Web app](#)
- Optionally in a frame on any website or blog as a plug-in

Is Notearama free?

Yes, for the foreseeable future. But because SaaS applications incur cloud compute, storage, and network costs, there may be future releases with more advanced features that will be on a fee basis.

How does Notearama differ from the Evernote and OneNote sharing features?

- Notearama provides a direct Web link to any notebook that can be shared or posted anywhere with no restrictions
- Evernote only allows sharing notebooks with specific email addresses
- When recipients receive an Evernote notebook invitation, sign in to Evernote is required
- When recipients receive a OneNote invitation, sign in to a Microsoft account is required
- When a notebook is shared in Evernote or OneNote, the recipient gains direct access to your workspace, although access is technically limited to the shared notebook. With Notearama, the shared notebooks are decoupled from your workspace through extreme security measures, so there is zero attack surface and only the notebooks you choose to share are exposed.
- Evernote and OneNote are not unified Knowledge Publishing Systems; each share is not managed and cannot be organized or formed in shareable collections.

What kind of content can I publish?

Any content created in supported PKM apps and that complies with our [Terms of Use](#), but Notearama is ideal for:

- More detailed, frequently updated, and/or time-sequenced content compared to a website
- Authoritative content with unique human perspectives and proprietary data
- Original information and lived experiences rather than summaries or generic information
- High-value content that AI cannot easily replicate
- See the [Use Cases](#) pages for content examples by target market and users
- Submissions are processed for grammar, writing quality, format, font, and style consistency, and terms of use compliance. Results are presented for users to review and approve or reject.

Can I edit my content in Notearama?

- No, Notearama is only a "headless" Knowledge Publishing System. All content creation and editing are done in your PKM app.

- You can change the sort order of your notes and organize notebooks into collections.

Can my content be found on search engines and by AI agents?

Yes. You have the option to make selected content public and indexable by search engines and AI agents, helping you grow your audience organically.

Can I interact with my audience?

Yes. Notebook viewers can exchange private messages with publishers. This feedback loop will help publishers improve, build new connections, and develop a loyal community.

Can I make money with Notearama?

Yes. Publishers can monetize their content through:

- Affiliate links such as Amazon Associates when a recommended product is purchased
- PDF sales of notebooks (future)
- Sponsorships (future)
- Ad revenue (future)
- [More ideas](#)

Is there a version for teams or larger organizations?

Yes. Notearama offers a custom-branded SaaS platform for businesses, organizations, and educational institutions that want to publish and manage rich HTML-based notebooks to complement their websites without implementing a costly, complex, and time-consuming Content Management System (CMS).

How can I get in touch?
